U.S.G.S. Gardner Pond, Me (7 1/2')

Fishes

Brook trout
Minnows
Redbelly dace

Blacknose dace
Creek chub

Physical Characteristics

Area - 32 acres
Average depth - 3 feet
Maximum depth - 4 feet

Temperatures:
Surface - 72⁰F
5 feet - 72⁰F

Principal Fishery: Brook trout

Sixth Pelletier Brook Lake is a eutrophic body of water in its last stage of life. It is shallow with about equal water temperatures at all depths. When water temperatures warm, spring inflow is crucial to providing sufficient cold water to sustain the trout population.

The trout fishery in the lake is maintained entirely by natural reproduction in spring inlets. Conservative fishing regulations have been implemented to maintain and enhance the sport fishery.

Two-wheel drive access near the pond is via improved private gravel roads maintained by industrial landowners for forest management purposes. Watercraft must be hand-carried a short distance to the lake.
